THE REDCLIFF REVIEW, THURSDAY, FEB. 20th, 1930

Number 50

## Council Appoints The Standing Committees

Utilities Board Satisfied with last Year's Showing

At the first Statutory Meeting of the town Council held last Monday, Mayor Worts and the newly elected Councillors, Messrs. Brydie, Champ and Shaw, were sworn in.

Mayor Worts welcomed the newly elected councillors and hoped all would work harmoniously together for the welfare of the town.

A motion was passed authorizing the Health Inspection to have the bylaw respecting Examination of dairy herds; advertised.

A letter was read from Mr. Wm Henderson, returning officer, giving the result of the municipal election on Monday, Feb. 10th. The auditors' report was read and on motion of councillors Champ and Brydie the report was received and filed.

A letter was received from the Board of public Utilities announcing that they had received the Auditors' report and were well satisfied with the Showing made by the council for the year.

It was decided to hold regular council meeting on the second and fourth Monday of each month.

Councillor Champ was chosen a deputy Mayor for the first three months.

The following standing committees were then appointed:

Finance—Cox, Champ and Dacre.

Water Works—Dacre, Champagne and Brydie.

Public Works—Champau, Brydie and Cox.

Licence and Police—Brydie, Dacre and Champ.

Fire and Light—Champ, Champagne and Shaw.

Sanitary and Relief—Shaw, Cox and Dacre.

Purchasing Com.—Brydie, Champ and Dacre.

The first named on each committee to be Chairman of that committee.

The following were appointed as the Board of Health for the town: Chairman—Dr. Ward.

Secy.—J. E. Tarrant.

Other Members—Messrs. A. McKenize, J. Kitcher and W. Pickering.

Harvey & Morrison wrote asking to be appointed as auditors for the year.

On motion of councillors Shaw and Brydie it was decided to secure prices from other auditors before making the appointment.

A letter was read from the Alberta assessment commission asking that an assessor be appointed at the earliest convenience so that the assessment roll would be completed within the specified time, as it was necessary for a new assessment this year.

The matter was referred to the Mayor with instructions to try to secure a suitable man for the position.

On motion of Councillors Cox and Champagne authority was given to purchase ticket to Winnipeg for Mr. Craig, as the understanding that he was going to live with his Niece there.

The usual accounts were approved for payment.

Archie Johnson, a former chief of police in Medicine Hat, was shot and killed in Vancouver last Saturday.

## Cure Recommended For Prairie Itch

It appears that recently there has been considerable of what is known as "prairie itch" in this district, and instructions have been received from the Dept. of Public Health as a cure for this disease. According to these instructions the patient should take a warm bath and a rub down with a stiff brush all over the body. After the patient has been thoroughly dried Danish Ointment should be applied all over the body and the patient put to bed with clean night cloths and bed cloths. In the morning fresh clean underwear should be provided. The top clothing if it be should first be wrapped in heavy brown paper and put in a hot oven after which the cuffs and collar should be run over with a good hot iron to kill all the organisms. Any material which can be boiled should be. The second night another bath should be taken and again fresh clothes and bedding used. One application of the ointment should be sufficient unless the patient is again infested.

## Two Western Films Coming To Cameo

Riding Tony, his wonder horse, Tom Mix gallops to the screen of the Cameo Theatre next Monday when the production, "The Drifter," in which Tom is starred, will be shown.

Kiddies and adults alike will find whole-hearted enjoyment in the countless stunts in which Tom participates in the new feature. These thrills include Tom's courageous ride on the wings of an airplane, his fight to keep possession of a mysterious white mule the only living being which knows the way to a hidden mine; and his fist encounters with a gang of desperados who secretly are a band of narcotic smugglers.

For color, picturesqueness, and romance there is no better background for a western picture than the gold rush days of '49, when the eastern hordes of "dual seekers" started westward to reap the hidden harvest of wealth. For this reason officials selected Joe Kane's thrilling yarn, "The Price Of Payson," for their west era star, Tom Tyler. The unusual screen offering at the Cameo theatre.

## Win Grand Challenge Cup

Following their victory in the Eastern Lines championship of first-aid teams of the Canadian Pacific Railway, the Windsor Station police team, of Montreal, carried off the Grand Challenge Cup for all first-aid teams on the Canadian Pacific system, defeating a team from Nelson, B.C., winners of the Western Lines championship, in the all-lines final at Ottawa recently. The Montreal team obtained 156 points out of a possible 275, and Nelson received 163. The trophies were presented by Hon. Hewitt H. Bastick, P.C., M.A., Speaker of the Senate, at a

pleasant informal dinner. The teams were judged by Colonel Charles A. Holquet, C.M.G., V.D., M.D., D.P.H., director of the St. John Ambulance Association, Canadian Branch. Above is the Montreal police team, left to right, standing: Constables E. G. Wyse, A. H. Stitt, and O. Tomlinson; sitting: Constable W. H. Allison, (captain of team), C. G. Miller, St. John's Instructor for Eastern Lines, and Constable W. W. Peterson. Individual cups, donated by Dr. H. A. Beatty, chief surgeon and medical officer of Canadian Pacific, were presented to all members of the team.

## Brick & coal Football Club Organizes

At a meeting held last Monday evening the Brick & Coal football club re-organized for the season. The following officers were elected:

President—T. Dutton.  
Sec.-Treas.—E. W. Lawson.  
Ex-Com.—G. Cook, J. McFadden, E. Jones, C. Kemp, W. Hill, League Representative W. Hill, Trainer—A. Stratton.

## New Serial to Start at Cameo

"Queen of the North Woods" is the name of the new serial which will start at the Cameo on Monday, March 3rd. This is a picture of marvellous scenery a modern story that grips the imagination. It is full of interesting characters and action; exciting adventure and thrilling mystery. A surprise climax in every episode topped by a beautiful romance. Don't miss seeing the first episode.

## Bray Lake U.F.A. Holds Annual Meeting

Here Report From Delegates To the U.F.A. Convention.

At the annual meeting of the Bray Lake U.F.A. Local of Brayville was held recently at Twink's Bros. residence. The financial statement of the local presented by the secretary showed that the local is in excellent financial circumstances. Mr. P. E. Birtwistle, the delegate to the U.F.A. Convention, was present and gave an excellent report of his impression on the convention which was very much appreciated by the members. The subject of the new taxation levied by the Provincial Government against truck owners who are hauling grain etc. for neighbors was introduced for discussion by W. H. Twink. The speaker thought the system was too complicated with the different classes of road travelled over, and the different tax per mile levied. This subject was left for consideration by members and will be taken up at a later meeting.

The Officers elected for 1930 were as follows:  
President—H. M. Twink  
Vice-President—A. Row  
Sec. Treas.—E. M. Stevens  
Directors: T. Kuper, C. D. Larsson, and E. Christensen.  
Entertainment Committee: H. Twink, C. D. Larsson, T. Wolf and W. H. Twink.

## Large Sum Invested In Local Industries

At a meeting of the Canadian Manufacturers Association held last week, H. N. Davies of the Ogilvie Milling Co. was elected Chairman. R. S. Hodge was elected a member of the local Executive and R. C. Hargrave as representative of the Provincial Executive.

In his address the retiring president stated that:

"The latest figures published by the Dominion Bureau of Statistics, which was in June, 1929, show that in the year 1927 there were 27 industries in Medicine Hat and Redcliff, with a combined total of \$6,890,461, giving employment to 872 people and paying salaries and wages totalling \$1,045,479. The total cost of materials for that year for Medicine Hat and Redcliff was \$8,380,374, and the total gross value of products was \$11,376,879.

Wheat took a bad drop on the Winnipeg Market last Monday when it fell back 5c a bushel. Prices revived some on Tuesday when it closed two & one-half up, but still is lower than in the middle of last week.

It is generally conceded that the early hatched chicks give the best returns in egg production, particularly during the winter months when the eggs are the highest in price. If one is going to breed early chicks it becomes necessary to arrange for comfort ables quarters and artificial heat.

The Whist Drive and Dance held last Friday evening under the auspices of the Skating rink committee attracted a fairly good attendance while the evening was pronounced one of the most enjoyable of the season. It was not the financial success expected.

## Redcliff Football Club Elect New Officers

Also Hold Dance on Monday March 17th

The annual meeting of the Redcliff Football Club held last Friday Evening was well attended and great enthusiasm was shown by all present.

The financial Statement showed the Club had had a fairly successful season and the opinion of the meeting was that an active interest would be taken in football circles this coming season.

The following officers were elected:

President—A. N. Collard.  
Vice Pres.—H. Champ.  
Sec. Treas.—G. N. Pearson.  
E. Com.—Messrs. T. Balmer, J. Learmonth, A. Larnson, E. Martin and R. Allison.

It was also decided that the Club put on a Whist Drive and Dance at the Club on Monday, Feb. 17th. Tickets will be issued at once and may be secured from any of the following dance committees:

Messrs. J. Learmonth, T. Balmer, H. Champ, G. Davies, J. Bell and H. Cathcart.

Owing to the mild weather the Hat bospital was postponed.

At the regular meeting of the School Board held last Monday, A. J. Learmonth was again elected Chairman. Most of the meeting was taken up preparing the estimates. Instructions were also given to hold more frequent fire drills in the school.

Mrs. Norman Wilson, of Ottawa has been appointed the first woman Senator in Canada. She is also the first woman in the British Empire to be appointed to the upper Chamber.

## Churches

## Inoculation For Typhoid

Medicinal Men Recommend Inoculation Wherever Typhoid Danger Is Present

There are certain definite and practical precautions which the public can, and should, take to protect itself against typhoid fever. One of these is inoculation with typhoid vaccine. This is a very simple process.

When a person gets a typhoid fever, his body becomes overrun by typhoid germs. Perhaps it is only a small number that gets into his body in the first place, but these germs propagate rapidly.

They are the army of death, and if it weren't for the fact that there is another army, trying to save the victim's life, every person who gets two or three typhoid germs into his or her system would be beyond saving.

The other army, this army of life, is on our side, consists of little bodies, or white blood cells, or phagocytes, as the doctors call them, that are put into our bodies by nature for the sole purpose of fighting with the army of death that attacks us every day.

The patient gets a typhoid germ through his mouth, by means of the food he has eaten, or the fluid he has swallowed. All of a sudden, the defending army finds that the typhoid germs have obtained entrance to the body for typhoid attacks up to a surprise attack. So the white blood cells have to do double duty, they have to defend the patient from what damage the germ army is already doing, and also prevent the germ army from spreading further.

The poor victim, whose body this is happening, is meanwhile very ill. Whether or not he dies depends on whether or not the defending blood cells can turn out quickly enough to overcome the quickly-multiplying typhoid germs.

Should the patient recover, then he has developed in himself something he has never had before. Whereas his white blood cells, before his illness, were equipped to fight with ordinary germs, now they have learned to defeat typhoid germs. If the patient who has recovered never have lived. What this means is that he will probably not get typhoid fever again, or if he does get it, it will never be more than a very mild form of the disease.

One day a scientist, at work on typhoid thought: "If the living typhoid germs will put the defending cell army to work in this way, why don't dead germs?"

The experiment was tried. The scientist put millions of living typhoid germs in broth. Then he sterilized the broth by boiling it, so as to kill all the germs. These dead germs were injected into animals. A little restlessness and feverishness was produced and lasted for a day or so, but otherwise there were no ill effects. After the process had been repeated once or twice, it was found that millions of the dead germs could be injected into the animals and have no effect whatsoever.

In other words, the cell army had been put to work just the same, but because the germs were dead, and could not multiply, the cell army easily won the battle. Yet the cell army, as a result of the struggles with the germs, was equipped to meet another invading host of germs.

After hundreds of tests had been made on animals, scientists found that it was sufficiently proven to be successful, and that they could test it out on human beings. They tried carefully at first, only giving the newly-found injections to travellers and medical students who volunteered to become subjects because they were going into places where typhoid was rampant. The same result came to them as came to the animals. Gradually the world became wiser, and this new discovery was a great boon to mankind. Nowadays inoculation is an accepted practice in all British and German armies. All medical men try it, whenever there is the slightest danger of typhoid being contracted.

Of course, it is impossible to introduce a foreign substance into the system without some reaction occurring.

Mistaken: "Have we the value of the shopping now, Mary?"—Walter J. J. Berlin.

W. N. T. 1519

The most that happens as a rule, however, is what we can best describe as an "out-of-sorts" feeling, lasting from twenty-four to forty-eight hours after the injection. Some people do not feel the slightest inconvenience from it.

When the needle goes into the skin, it is a yambud!

It is healthy food. The amount of the injection is about eight drops for the first dose and about sixteen for the second. The first one contains about 500 million, and the second 1,000 million of the dead bacilli. The injections are usually about ten days apart.

## Sounds Like a Paradox

Fire Department Pays the Greatest Returns When Laid

People generally—and especially those who pay the taxes—are exceedingly loath to spend money on fire departments and fire-fighting equipment. It remains idle so long, and firemen have so little to do under ordinary circumstances, that the unthinking ratepayers—of whom there are a large number in every community—regard such expenditure as the tying up of a huge sum of money that can do no visible results are secured.

It may sound like a paradox, but, in reality, the people of any city are getting the greatest return from the money they spend on fire departments when the firemen and their equipment are laid up.

It is the protection that counts, and when that protection is needed, it is badly needed. There should be enough fire-fighting equipment and a sufficient number of trained men to break up a reasonably successful fire fight against any fire which may break out at any time.

## Britain's Few Population

Outnumbers Human Beings In Proportion Of Four To Three

It might seem a hopeless task to count the chickens in Britain, but a poultry census is taken every year, which gives us the number of fowls in holdings of over one acre. When the last census was taken the number was 88,915,978. As hens lay in backyards, which are not included in this figure are supposed to account for about a quarter of the total fowl population, this means that chickens outnumber human beings in Britain, the proportions being approximately four to three. Lancashire, it claims, it gives England the lead in most things, certainly does lead in poultry. It has a large poultry population than any other part of the country.

## The Hecker Scored

The candidate was encountering unlooked-for opposition. In a weekly meeting of the local committee he had come off second best against a formidable, determined band of "wet" hecklers.

"Who brayed them?" he demanded in a loud voice, and paused triumphantly in the silence which greeted him.

As he made to recommence his speech a voice came out: "Perhaps it was only an echo, governor."

A fly no bigger than a bee has been recorded to do 313 miles per hour.

## Speeding Up Plant Growth

Electric Wheat Lights Used At Ottawa To Grow New Wheat Varieties

Under the glare of electric flood lights, thousands of young wheat plants are growing at the Dominion Experimental farm at Ottawa. It is the hope of officials of the cereal division, Department of Agriculture, that some of these plants may prove to be the progenitor of new varieties which would add considerably to the monetary resources of Canadian farmers.

The element of time enters into the reason of artificial light being used in the experiments, an official of the cereal division explained recently. Two crops may be grown in a single year under the battery of 300 watt lamps which have been set up.

Thus the development of new cereals may be speeded up so that instead of requiring eight years to produce seed enough of a new variety to permit it being subjected to final trials for yield, this may now be accomplished in half that time, generally speaking.

Not only is it possible to grow these hybrids under electric light, but also is possible to create new lines during the winter by the process of hybridizing or crossing the different varieties used as parents. The former mature, and their seed is then ready to be sown in the field in the spring for summer sowing.

Besides wheat, other cereal crops such as barley and oats, as well as peas and flax are being grown in the illuminated greenhouses.

## New Kind Of Prodigy

Precedence Of Children Is Shown In Modern Way

Precedence in children generally shows itself in some intellectual way, according to the New York Sun, but recent evidence discloses a new kind of prodigy. A 7-year-old girl who lived in Elmhurst, has laid an estate of \$15,000, and a man in Chicago, who broke open his baby's bank to cover stock margin losses, invested \$17,000 in the same way. The girl, who is a financial genius, has not only made a fortune but also is a philanthropist. She has given \$10,000 to a hospital, and \$5,000 to a church. Her father, who is a doctor, has been told that she is a prodigy of a new kind. He has said that she is a "financial genius" and that she is a "philanthropist".

## Divide The Honors

A three-legged cat at Beacon Falls, Conn., has entered a free competition with a two-tailed cat which is the pride of a New Haven fire-house. Despite his handicap, the local cat is as good as his better-equipped brothers and sisters.

There isn't anything much more buoyant than a rumor. It is always so much easier to float one than to sink one.

A turtle's heart will beat for three or four days after the rest of the body has been made into soup.

## Proper Care For Watch

Four Rules Which Will Ensure Time Keeping Service

Follow these simple instructions—and your watch will keep good time. Almost any watch will run for months after the last particle of oil on the bearings has disappeared.

And it goes without saying that oil will follow as surely as night follows day. It must be overlubed periodically—taken apart entirely—removing old dried-up oil and dirt; replenishing parts, to prevent them being spoiled for good timekeeping. Oil in a lady's small watch will last about six or eight months. It takes a grain of dirt the size of a needle point to stop the watch. Dirt will get inside.

When you buy an automobile, you are instructed how the machine must be looked after constantly, for which work you pay a service station.

Your tiny watch is a thousand times less work no running constantly, for so isn't it reasonable to have it attended to once in a while for a small service charge?

Be sure to wind your watch up fully (preferably in the morning). Do not be afraid of overwinding. This is particularly true with the small watch because it runs 24 hours unless it is wound tightly.

In washing your hands, avoid getting water on the watch.

A severe jer or dropping of the watch will bend the balance pivots (axle), causing it to run irregularly. Such damage does not always show its effect immediately.

A small watch will give its owner warning and stop as soon as the oil thickens, because of the little power required to run it—while a large watch, on account of its greater power, will keep on running, after all lubrication has disappeared, frequently doing considerable damage.

## Watch Your Children

More Care-Do Dilemma Between Ages Of One and Six, Than At Any Other Time

Guard your children carefully between the ages one and six, for statistics show that during those five years, more children die of communicable diseases than at any other time. From 50 to 75 per cent. of all deaths from diphtheria, over 80 per cent. of deaths from pneumonia occur during this period. At their first six months, a baby loses the comparative immunity to disease, which it inherits from its mother.

## Dedging "A Few"

Eleven cents seem mighty "few" when one is hungry. Two bolts are two too many. One hundred in a large audience constitute a very few, while a dozen guests at home make a crowd. But according to the twentieth verse of the third chapter of 1 Peter, a few is "right"—and if you don't believe it, look it up.

Powdered seals' liver was recently exhibited at a London show. It is used in connection with heart trouble and anemia.

"Are you a doctor?" she asked the young man at the soda fountain. "No, madam," he replied, "I'm just a hankiner."

## Fake Totem Poles

Coast Indian Curious Sold To Be Manufactured In Japan

This, purposely or inadvertently, friends, is perpetrated on citizens of Canada as well as foreign guests to the National Museum in Ottawa, steamships, hotels and cruise liners is strongly suggested if not proven by a letter just received at the National Museum of Canada, in Ottawa, from one of the largest Chinese Importers of oriental goods on the Pacific coast.

This letter reads as follows: "Dear Sir,"

"It appears that all Totem poles that we have been able to buy in and about Vancouver, come from Japan. China does not make any Totem poles as far as we know. We have not seen any genuine native Totems except those large ones in the parks and other places of amusement."

"We are forwarding you our catalogue under separate cover."

One of the items in the catalogue mentioned is as follows: "Thunder Bird" Totem Pole—A souvenir of Vancouver and the Pacific Northwest. Entirely hand carved out of bone and painted in gorgeous colors. (etc.) All sizes. 2 inches high. Price 40 cents. Other prices follow up to 10 inches high. Price \$1.50. The same catalogue lists Totem poles made of wood at prices for the cheapest 40 cents, and for the most expensive \$1.50.

In the same catalogue are listed and priced many genuine oriental products, some of them rare and valuable, many at cheap and reasonable prices considering the excellent workmanship. These last are signed in the hands of a tourist trip to Chinatown or to the Province quarter of our western cities.

As to the Japanese made Totem poles catalogued and sold as souvenirs of Vancouver and the Pacific Northwest, without going into the details of the matter, it is certainly no surprise to our tourist friends that by selling them Japanese made Totem poles as souvenirs of our city, they are doing a good business.

The National Museum of Canada, with its facilities at the service of the representative of the National Museum of the Province of British Columbia, has discovered with them. He also gave the provincial authorities an opportunity to secure specimens discovered by him for scientific collection. The two institutions have a photograph from each other's collection.

## Worth Good Sized Fortune

Much Wealth Is Locked Up In Old Jewels

How much there is of monetary value tied up in old-time and of scarce old jewelry is a question often propounded. There is a lot of that kind hidden away in many places, but hardly anybody would feel competent even to hazard a guess as to the value in the aggregate.

Such a family collection of old jewelry, including watches, rings, bracelets, chains, pins, earrings and a variety of gold and silver ornaments, may represent a wide range of period had its fashion is jewelry. Many of the specimens preserved from an interesting collection, with sentimental associations that make them the more cherished as mementoes.

In the family jewel box of old-time and discarded articles of personal adornment may be seen the locket bracelet which the "granma" wore and which contained either the likeness or lock of hair of a dear one, or both. In the same category belong the antiquated necklaces of innumerable designs, which would be worth a good deal of money in the aggregate through the value of the precious metals of which they are made. What an assortment of earnings too, the old-time jewelry collector would be interested in the lookers-on permitted to inspect them!

Wife: "A poor woman came today to ask for old clothes."

Man: "What did you give her?"

Wife: "That old suit you have had for ten years and the dress I bought last winter."

Sea water contains 1,500 tons of solid matter per cubic mile.

It is late—go and see how dark it is in the street.

"I have been out, but couldn't see because the lamp was not lit."

Peppes Gales, Yverdon.

## Canadian Flour Liked

Scotland Prefers It To All Others, Says Trade Commissioner

For some time past, and continuing until very recently, Canadian flour sales in Scotland were falling off heavily as prices went out of line, says a report by G. H. Johnson, Canadian Trade Commissioner, at Glasgow, just received by the Department of Trade and Commerce. Mr. Johnson reports, however, that "this situation is passing, if it has not already passed." All things being equal, the Scotch consumer prefers Canadian flour to all others, Mr. Johnson reports.

Trate Boss—"Don't you ever do anything on time."

Tardy Clerk—"Yes, sir, I bought my coat that way."

He: "What can you see in Tom?"

He doesn't like reading, smoking, drinking, sport.

She: "Ah! But he likes me!"

A thrush can sing for 16 hours at a time, according to a British naturalist.

## SANTA CLAUS WELCOMED ON SHIP

Boards of happy youngsters received a surprise visit from Santa on Saturday night before Christmas, on the Atlantic Ocean liner "Atlantic" prior to departure for Europe. In the traditional manner, Santa dispensed gifts to all the boys and girls travelling in the big ship before vanishing as mysteriously as he came.

WORLD HAPPENINGS  
BRIEFLY TOLD

France's 1930 naval budget calls for the construction of one cruiser, six destroyers and six submarines. These projects were adopted by the Chamber of Deputies.

Palestine is inching in move-  
ment. The airplane at Kalaia, ten  
kilometers north of Jerusalem, is be-  
ing enlarged. Twenty thousand of  
have been acquired for the purpose.

The past year has been a busy one  
for the manufacture of clay products  
in Saskatchewan, according to Profes-  
sor W. G. Worcester, of the ceramics  
department, of the University of Sas-  
katchewan.

Resident in Edmonton for 60 years,  
and one of Western Canada's earliest  
pioneers, Mrs. Kenneth McDonald  
died there at the age of 101 years.  
She was born at Cumberland House,  
Sask., on May 27, 1827.

The Aeronautic Society has issued  
a statement that the projected North  
Pole expedition in the dirigible Graf  
Zeppelin has been called off for 1930,  
but that it is fully expected the flight  
will be made in 1931.

Fire, believed to have been caused  
by a defective fuse, destroyed a new  
commercial radio station at Nome, Alaska.  
A small amount of equipment was  
saved and communication again estab-  
lished with St. Michaels, about 200  
miles away.

Convinced that there is no hope of  
finding alive Pilot O'Leary, the  
McIntosh and Co. Limited, employees  
of the Curtis-Reid Aircraft Co., lost  
in Northern Quebec, for just  
three months, the National Defence  
Department ordered the detachment  
of five Canadian Air Force planes to  
conduct the search.

Logging in Northern  
Alberta Is Slack

Lumber Carried Over From Last  
Year Shows Up Work

Logging will be slack in northern  
Alberta this winter and there will not  
be the usual stir at the lumber camps.  
According to the manager of one lum-  
ber company, not more than 25 per  
cent of the ordinary winter logging  
will be done this coming season. The  
last season given for this is the econ-  
omous carry-over of lumber from last  
season.

This carry-over is due in large  
measure to the dry summer and con-  
sequent reduction in the wheat yield.  
The lumber business was dull all sum-  
mer as a result of a drought affecting  
the farmers' building operations,  
many farmers having cancelled their  
plans for new buildings when the  
crops began to show the full effects  
of the dry summer.

Besides this there was a much  
smaller program of elevator-building  
in the country than in 1928, which  
was a record year. One big lum-  
ber firm states that its carry-over is 15-  
000,000 feet, the largest in the com-  
pany's history.

## Ideal Air Port

City Of Moose Jaw Claims To Have  
One Of The Ideal Airports Of  
The World

The Moose Jaw Field of Trade  
claims for its city to be the possession  
of one of the ideal airports of the world.  
It points out that the soil of the field  
is black loam with gravel, which  
therefore is free from conditions  
which invariably obtain with heavy  
rains. The field has a natural drain-  
age, is virgin prairie, absolutely even  
and is an ideal, all-weather site. No  
quagmires are possible and large,  
heavily loaded machines experience no  
difficulty in taking off at any season.

## Manitoba Fox Breeders

In competition with entries from all  
parts of Canada and the United  
States, Manitoba fox breeders took  
part of the award for the best  
Western Canada International silver  
fox show.

Only two flowering plants occur  
on the Antarctic plateau, and these  
are rare.

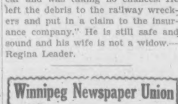

"You don't know why the English  
sought at Waterloo?"  
"No, don't want to let you go to  
look at fight."—Pages 6 and 7.

W. M. U. 1919

## Playing Safe

Automobile Took No Chances With  
Train When His Car Stalled On  
Crossing

There is a man in Western Ontario  
who has lived up to his teaching. Al-  
ways he declared that if ever his car  
stalled on a railway track with a  
train approaching he would make no  
attempt to start it. "I can buy another car,  
but I can't buy another chance after I'm  
dead," he said. A couple of weeks ago  
he bought a new car and took it for a  
run. Crossing a railway track it  
came to a halt. The driver was ap-  
proaching from a distance. People  
told him he had time to get her going,  
but this brave chap got out and wait-  
ed to the side of the road. The new  
car was reduced to matchwood. Some  
people said he was a fool, but if so,  
he was a wise one. He had insured his  
car and was taking no chances. He  
left the debris to the railway wreck-  
ers and put in a claim to the insur-  
ance company. "He is still safe and  
sound and his wife is not a widow—  
Regina Leader.

Winnipeg Newspaper Union  
Takes  
(By Anabelle Worthington).

Lord Cleveland has 1,380 acres  
to run in Alberta, and Lord  
Hodney, 618 acres. The Earl of  
Glencairn still holds 320 acres near  
Edmonton.

## British Nobility Farmers

About Fifteen Thousand Acres Of  
Alberta Farm Land Held By  
British Nobility

About 15,000 acres of farm lands in  
Alberta are now owned by mem-  
bers of the British nobility. Of these,  
the Duke of Rutland carries the  
largest holdings. The Duke of  
Rutland and the Earl of Devonport  
own 9,200 acres.

Earl Minto is the second largest  
holder, with 1,000 acres. He is fol-  
lowed by the Prince of Wales,  
whose famous K.P. ranch consists of  
1,400 acres. In addition to this, how-  
ever, the Prince leases another 1,440  
acres, so that his total holdings are  
2,840 acres, which brings him, actu-  
ally, into second place.

Lord Cleveland has 1,380 acres  
to run in Alberta, and Lord  
Hodney, 618 acres. The Earl of  
Glencairn still holds 320 acres near  
Edmonton.

## Swine Breeders Elected

Canadian Swine Breeders' Association  
Elects For 1929

Mr. R. W. Wade, secretary-treasurer  
of the Canadian Swine Breeders'  
Association, announces that the  
annual meeting of the association  
directors of the Maritime, Manitoba,  
Alberta and British Columbia, result-  
ed as follows:—Maritimes, P. J. Le-  
gault, Little Rock, P.E.I.; Manitoba, A.  
C. McNeil, N. A. Brandon, Man.;  
Alberta, W. L. Gray, Millar, Alberta;  
British Columbia, J. W. Shannon, N.  
D. Cloverdale, B.C. The directors for  
Ontario and Quebec will be elected at  
the provincial annual meeting of the  
Association, taking place in February,  
and for Saskatchewan at the annual  
meeting of the Canadian Association  
in March.

## Growth Of Hydro

The History Of Canada's Water  
Power Development

The development of Canadian water  
power has its inception in the efforts  
of the early French settlers to pro-  
vide power to meet local needs for  
grinding grain and sawing lumber.  
With the application of the electric  
generator to commercial uses a little  
more than a century ago, the water  
power industry has become a reality.  
—the production of electricity for  
public use—and a new era in the de-  
velopment of water power came into  
being. Since that time the two have  
advanced together until at the end of  
1928, Canada's hydraulic installation  
had reached the imposing total of 5-  
490,232 horsepower of which 4,465,093  
h.p. was used in generating electricity  
for general public distribution.

## Shaw's 350 Years Old

James Davidson, of Owen Sound,  
Ontario, is the proud possessor of two  
old shaws which have been handed  
down from generation to generation.  
The oldest shaw is said to have been  
hand-worked pattern, made in  
Aberdeen, Scotland, over 300 years  
ago. Though he has received considerable  
attention it is still in good condition.  
The other shaw is over 170 years of  
age, of Scotch tartan, and has the  
appearance of practically a new shaw.

## Settled Old Debt

A story from Dundalk, Ireland,  
told of an old man who walked into a  
shop there and informed the astonished  
proprietor that he had called to pay  
a five-shilling debt that he had incurred  
for 48 years. There was no record  
of the transaction, but the proprietor  
explained that he had bought a pair of  
children's shoes in 1881 and had left  
immediately for a job in England.

Gold produced in the world during  
1927, amounted to 15,000,000 pounds  
sterling.

There is a strict ordinance prohib-  
iting the abuse of cats in St. Ives,  
the famous Cornish fishing town.

## Debt To Schoolmasters

Should Be A Pleasure To Do Honor To  
Those Who Taught Us In Our  
Youth

Too few of us do honor to those  
who taught us in our youth. We  
ready even to recognize the debt we  
owe to schoolmasters who guided us  
in our early days. For this reason we  
call attention to the fact that within  
the past year two of the high school  
teachers, who taught at the late St. Mary's  
College, in the old St. Mary's College  
Institute, have passed away in  
London, the late Stephen Macdonald,  
and last week Frank P. Riddell. In both  
cases Mr. Meighen took the time from  
a busy life to come all the way to Lon-  
don to attend their funerals and to  
pay a last respects to his old teacher.

What is more, Mr. Meighen never  
forgot them in life. He never visited  
London without endeavoring to get in  
touch with his old teachers. The last  
time Mr. Meighen spoke in London,  
was to the Chamber of Commerce,  
and he spoke of his old teachers. One of his  
first acts, after arriving in the city, was to phone  
both men and arrange to see them.

Mr. Meighen's thoughtfulness and  
kindness in this respect is a les-  
son for us all—London Free Press.

## Recipes For This Week

(By Betty Barclay)

## STRAWBERRY LUNCHEON

2 cups granulated sugar,  
½ cup cold water,  
¼ teaspoon cream of tartar.  
Strawberry Jam.

Discard sugar in water on back of  
range. Place thermometer in syrup  
and bring to boiling point, stirring  
well. When the boiling begins to  
all stirring, but wipe down sides of  
saucepan with moist brush or bit of  
dampened cheesecloth. Or cream  
butter, cover saucepan for a moment  
then boil quickly until mixture will  
form a soft ball when dropped in water  
from spoon. Pour out on lightly  
greased platter, cool until syrup can  
be handled, then fold rapidly back and  
forth until creamy. Knead to smooth  
compact, soft mass.

The strawberry jam should be added  
to the proportion of two table-  
spoons to each cup of the mixture.  
Melt the mixture to a semi-liquid  
state, then stir in the jam rubbed  
through a sieve. Stir well while the  
final mixture is stiffening. Drop  
the patties from the end of a spoon,  
or make into balls between the palms of  
the hand and flatten by pressing  
gently.

## GRAPEFRUIT AND FIG SALAD

3 large grapefruit,  
2 cups traverses six miles per  
hour.  
1 lemon for dressing.

Peel fruit, remove membrane from  
each section, cut meat into pieces  
with figs. Serve with dressing made  
of lemon juice, a dash of paprika  
and a suggestion of powdered  
sugar. (One teaspoon to a half cup  
of dressing.)

A highway in the Rodal Valley,  
situated in the mountainous district  
of Norway, traverses six miles per  
hour and forth to make one mile of pro-  
gress forward.

## An Unnecessary Evil

Medical Authority Says No Person  
Should Be Raped

A distinguished medical authority  
stated recently that badness is un-  
necessary. He attributes the "part-  
tial" nature of the law to the "part-  
tial" nature of the law, and lack of  
exercise. He is probably right—up to  
a point. Yet, however honest has been  
declared in clear, but vulgar, terms,  
that "you cannot grow grass on a  
bushy street." Crude as it is, that has  
always been the comfort of the  
lawyer. They have believed that the glit-  
tering dome contains the finer interior.  
They have even argued that there is  
a majesty of outline in the uncheck-  
ed upward sweep of the masculine  
arrows. In short, while willing to try  
any new hair restorer put on the mar-  
ket, the bald refused to believe that  
lack of hair lends anything but dis-  
tinction.

## Why Winter Is Cold

Why is it colder during the winter  
months than it is in summer? Many  
will immediately reply by saying that  
it is because the sun is further away.  
As a matter of fact, the sun is nearer  
in winter than it is in summer, but  
it strikes the earth at a more oblique  
angle. In winter the sun's rays strike  
warm as does the sun of June,  
July or August, as it beams from di-  
rectly overhead.

Enough care were produced in the  
first six months of 1929 to lay all  
pedestrians end to end.

Opportunity knocks but one door  
in winter and this door is not  
warm as does the sun of June,  
July or August, as it beams from di-  
rectly overhead.

Prodigal I've decided to settle  
down and go in for raising chickens.  
Sceptical Father: Better try owls.  
Their hours should suit you better.

## Wonderful Device

Human Heart Can Now Take Photo-  
graphs Of Itself

The human heart has been exhibited  
as its own photographer at a demon-  
stration of a new X-ray device at the  
University of Pennsylvania. Dr.  
F. Maurice McFadden, roentgen-  
ologist, of the Henry Phipps Institute,  
collaborated with his own heart.

The instrument reduces the vari-  
ous parts of the heart into pictures, and  
have hampered physicians in making  
accurate pictures of conditions in the  
lungs and heart, which are always in  
motion.

By an elaborate system of electrical  
connections, percussion instruments,  
mirrors, fans and electric lights, the  
heart is made to take pictures of it-  
self and the lung cavity at any point  
in its cycle of movement that the  
doctor may desire.

A rubber bulb similar to those used  
in photography is attached to a glass  
camera shutter, is cut diagonally  
across and left open. This open bulb  
remains pressed against the heart, the  
carotid artery in the throat in such  
a way as to make the pulse beat like a  
finger, squeezing air through the rub-  
ber tube which runs to the relay box  
and electrical amplifier.

At every pulse, electrical contacts  
are made which reflect light on a  
mirror which in turn set off a chain of  
electrical circumstances that resulted  
in exposure of plates placed on the  
illuminated breast and lungs at regular  
intervals.

## Seed Extraction Plants

Seed Used in Experimental Planting

Operations In New Brunswick  
The Forest Service of the Depart-  
ment of the Interior has established  
four seed-extraction stations for ex-  
tracting the seed of forest trees. The  
largest of these is at New Westminster,  
British Columbia, and smaller  
plants are situated at Rocky Mount-  
ain House, Alberta, and Indian  
Head and Prince Albert, Saskatchewan.  
The seed is extracted for use in  
experimental planting operations  
on the national forests, and in the  
production of trees for free distribu-  
tion to private planting operations.

By special arrangement with the  
authorities concerned considerable  
amount of seed is used in the  
New Westminster station of the  
Dominion Forest Service, are each  
shipped to the British Forestry Com-  
mission, and to the New Zealand For-  
estry Department, to be used in their  
extensive planting operations.

The level of the oceans would be  
raised about 90 feet if the Antarctic  
ice cap should melt, an Australian  
geologist believes.

Neil: "Mamie, you look down-heart-  
ed."

Mamie: "Yes, I wish I were dead or  
married. Preferably the latter."

## WINDOLITE

MADE IN ENGLAND

### The Improved Glass Substitute

COMES WITH A MESSAGE OF HEALTH

**THE** sun is the all-powerful life producer. Nature's universal delectable and germ destroyer. WINDOLITE is the sun's most important ray.

Medical research has definitely proved that from the point of view of Health and Hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not allow the passage of Ultra-Violet rays, so that by using glass we are actually robbing ourselves of health-giving rays. Therefore, the invention of WINDOLITE has completely satisfied the long-felt want. Exhaustive experiments have conclusively proved that it is a most effective substitute for glass. It not only admits the Ultra-Violet rays, but that it is a most beneficial effect the growth and development of plants and chickens and the raising of calves, and has enabled for the first time to have healthy light instead of darkness in the home.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized the raising of calves, and has improved the health of cattle and is now being used in domestic and household requirements.

**WINDOLITE** stands for 100 per cent sunlight. It makes light last strong windows for cattle sheds, dairy stalls, poultry houses, brooder houses, and all other buildings. It is strong, unbreakable, flexible and is easy to cut and fit. It is now being successfully used for sunrooms, verandas, schools, factories, hospitals, sanatoriums, bird beds, plant coverings and greenhouses. It keeps out cold, rain, snow or other weather conditions, and is easy to fit. WINDOLITE is supplied in any length or width of 6 to 12 inches and in square yards of WINDOLITE weighs about 14 cwt., while a square yard of glass of the same weight would weigh about 130 to 150 cwt. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price 6/6 per Square Yard, Excl. Tax, Toronto.

Use WINDOLITE on all
